# Quite Revealing

Quite Revealing is an Adobe® Acrobat® plug-in. It works with the full Acrobat 7.0, 6.0, 5.0 and 4.0. NOT the free Acrobat Reader.

When you start it you will be able to choose what information you want to see. All functions are only one click away from this control centre.

In each view you will see a list of all the items in the file. Here is the RGB, process and spot plates.

You can see side-by-side, a live view of the document. If you zoom, scroll or edit the view will follow.

Each type of view can have suitable actions. This is the view of embedded profiles. You can set, remove or export profiles.

Other actions include: rename, recolour or merge spot plates; convert spot plate to process; remove or apply transfer functions; remove halftone; remove transparency effects.

All actions apply to the whole document and most with just one click.

Quite Revealing is simple to use and quick to learn. There are no special training needs. The central control panel and visual tracking makes it an uncomplicated tool to use and easy to follow on screen.
